ATHARV SINHA

Bhopal, India | +91-8651912412 | atharv.sinha2k21@gmail.com | linkedin.com/in/atharvsinhaa | github.com/atharvsinhaa

SUMMARY

Full-stack software engineer skilled in shipping end-to-end platforms — from responsive front-ends (Angular, React) to scalable backend APIs (FastAPI, REST) and structured data layers (Neo4j, SQL Server). Experienced integrating machine learning models, large language models, and graph-based knowledge systems into production applications, with solutions validated at 86%+ accuracy across real-world codebases and datasets.

EDUCATION

Vellore Institute of Technology September 2023 – May 2027
B.Tech. in Computer Science (AI and ML), 4th Year (Final Year) **CGPA: 7.26**

EXPERIENCE

Bharti Airtel – Head Office, Gurugram May 2026 – July 2026
Software Development Intern, Offline Internship

- Independently built a full-stack SaaS platform (Angular, FastAPI) combining AST-based static analysis, a local LLM (Ollama), and a Neo4j knowledge graph to auto-generate enterprise-level HLD, LLD, and commented source code from any repository, folder, or pasted code.
- Validated the platform across 5 real-world codebases (including FastAPI, Flask, and Celery), achieving 86% overall documentation accuracy (88% LLD, 82% HLD) at a ~4–5 minute average generation time.

PROJECTS

Automated Technical Documentation Platform May 2026 – July 2026
Angular, FastAPI, Python, Ollama, Neo4j, Docker Github

- Identified that engineers lost significant time manually tracing logic across large, unfamiliar codebases, slowing onboarding and documentation.
- Designed a GraphRAG-driven semantic search layer over a Neo4j knowledge graph, embedding AST-parsed code entities and relationships for context-aware retrieval.
- Integrated the layer with a local LLM (Ollama) to answer natural-language code queries, cutting manual code-navigation effort across unfamiliar repositories.

ZENITH: AI-Powered Mental Health & Well-Being Platform December 2025 – February 2026
Python, Machine Learning, JavaScript, HTML, CSS, Jupyter Notebook Github

- Identified a gap in accessible, technology-driven mental health support and set out to deliver an end-to-end platform pairing a web front-end with an ML-based assessment engine.
- Built and trained a machine learning classification model reaching 92% accuracy, structuring the pipeline — preprocessing, training, evaluation — across 20+ documented Jupyter Notebook cells.
- Implemented a responsive HTML/CSS/JavaScript front-end to surface real-time, ML-driven well-being insights, bridging the data pipeline with an accessible user interface.

Skin Cancer Detector August 2025 – September 2025
Python, Deep Learning, JavaScript, HTML, CSS, Jupyter Notebook Github

- Addressed the need for accessible preliminary skin-lesion screening by building a deep learning-based computer vision web application.
- Trained and tuned a convolutional neural network on dermatological image data, achieving 92% classification accuracy across lesion categories.
- Deployed a web interface that surfaces top-3 diagnostic predictions with confidence scores, turning raw model output into an interpretable, clinical-style report.

TECHNICAL SKILLS

Programming Languages: C++, Java, Python, JavaScript, SQL
Frameworks & Libraries: React, Angular, FastAPI
AI/ML: Machine Learning, Deep Learning, Computer Vision, LLM Integration, GraphRAG, Semantic Search
Web: HTML, CSS, REST API
Databases: Microsoft SQL Server, Neo4j
Tools: Docker, GitHub, Postman, Jupyter Notebook

CERTIFICATIONS

Applied Machine Learning in Python – Coursera January 2026
Zero to Mastery Python Developer – Udemy May 2025
